We will refer only to one actor: the tutors.

In order to offer tutorials through 'Digital Tutors' site, tutors must be registered and create an account where they keep their personal and financial details. More specifically, tutors must provide the following information: name, phone number, qualifications, subjects to teach, bank account number and rates. Tutors can offer tutorials to more that one subject. For each subject they teach, they must provide the subject title, the subject code and a brief description. In order to access their account, tutors must login.

Using object oriented PHP and MySQL, I have created a web site that will allow tutors to login, browse the details of their account and take specific actions. Tutors will be able to perform the following actions: **add** a new subject to teach; **delete** an existing subject; **edit** an existing subject

Logical ERD:
